34%
Of September spend is AI

MONTHLY CLOUD CONSUMPTION

Jan to Sep 2026

September 2026

HAREL Insurance & Finance

THE BOTTOM LINE

Cloud spend is up 22% and all of the increase is AI

TOTAL CLOUD YTD

$4.67M

Consumption $2.31M
Committed $2.36M

CONSUMPTION RUN-RATE

+22%

Q1 avg $238K/mo,
Q3 avg $290K/mo

EVERYTHING EXCEPT AI

–13%

Non-AI spend fell
from Q1 to Q3

SAVINGS DELIVERED

$578K

Realised $268K,
avoided $310K

THREE THINGS TO TAKE AWAY

1 **AI went from $9K to $102K a month**

An eleven-fold rise in nine months. At the September rate that is $1.22M a year, and it is already a third of what we consume.

2 **The existing estate is shrinking**

Take AI out and spend is down 13% from Q1 to Q3. Rightsizing, the reserved-instance purchases and the North Europe exit are all landing.

3 **Two decisions are due before Q1**

The Databricks commitment is 29% used after five months, and Azure raises prices in February. Both affect the 2027 budget.

AGENDA

What we will cover

01 Where the money goes

Total spend, run-rate, and the split between usage and commitments

02 AI and the AI Factory

The fastest growing line: Bedrock, Foundry, Copilot and the governance gap

03 Amazon Web Services

$2.61M year to date, and why most of it is contracts

04 Microsoft Azure

$2.05M, the February 2027 price rise and the Databricks commitment

05 Savings and optimisation

$578K delivered, compute coverage, and a $190K pipeline

06 Risks and next steps

What moves the FY2027 budget, the workplan, and the decisions we need

About thirty minutes on sections 01 to 06. Account, service and cost-centre detail is in the appendix, held for questions.

01

Where the money goes

Total spend, the monthly run-rate, and the split between what we consume and what we commit to in advance.

TOTAL CLOUD SPEND

Harel spent $4.67M on cloud in the first nine months of FY2026

AMAZON WEB SERVICES

$2.61M

Consumption $792K · Marketplace $1.82M

MICROSOFT AZURE

$2.05M

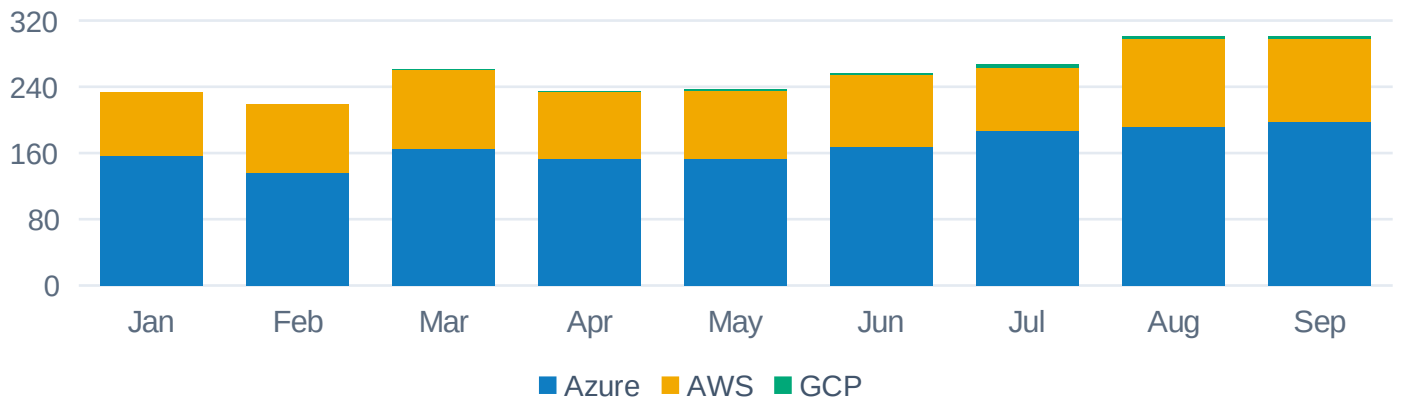

Consumption $1.51M · Marketplace $542K

GOOGLE CLOUD

$14K

Started March 2026 · Vertex AI pilot

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$234K	$218K	$261K	$235K	$237K	$256K	$267K	$301K	$301K

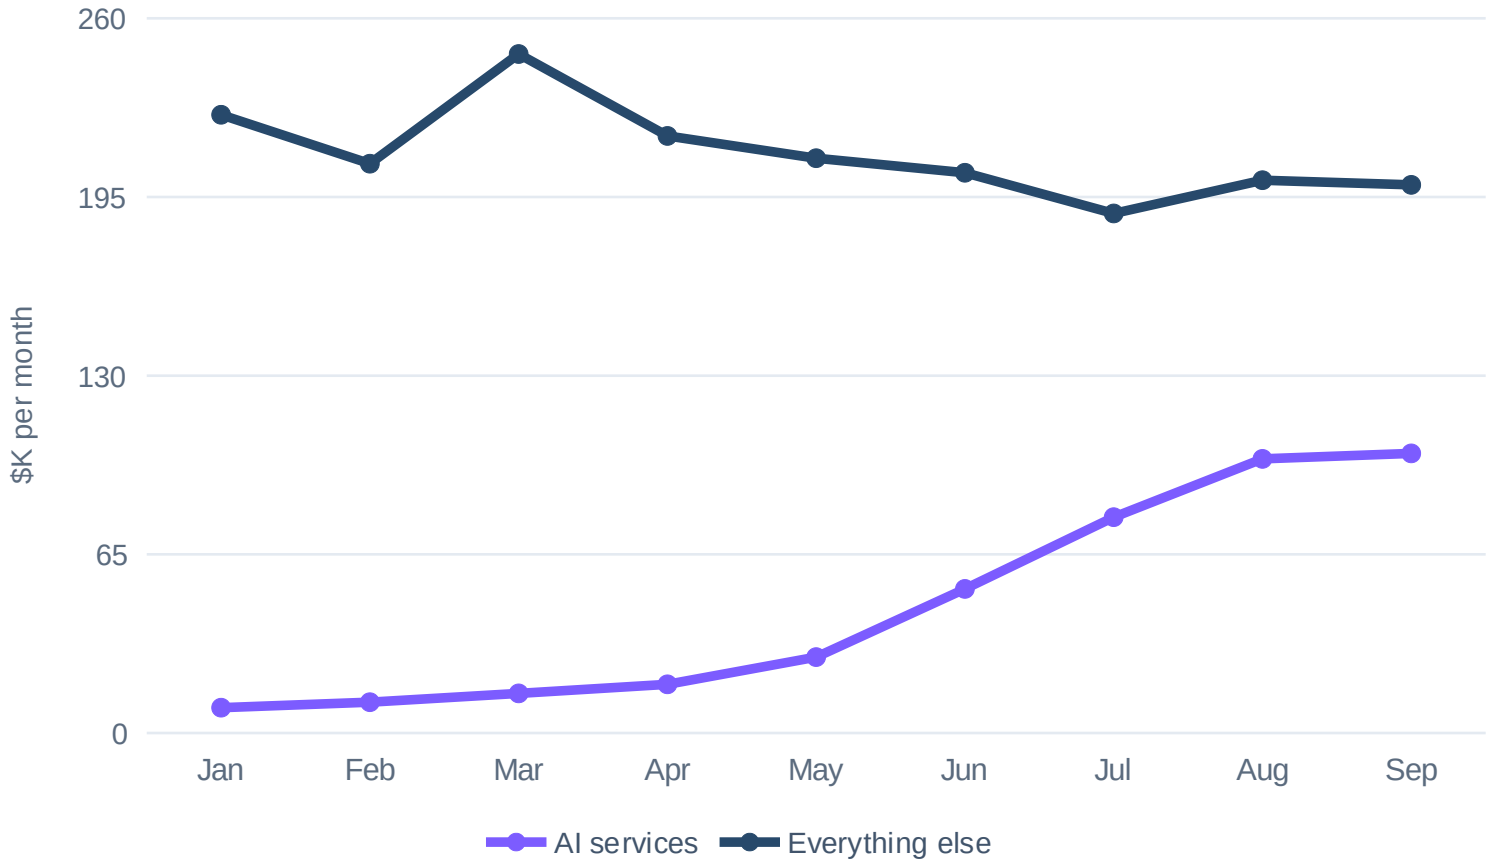

Two different kinds of spend

- **Consumption $2.31M**
  Metered usage. This is the part we can tune month to month.
- **Committed $2.36M**
  Marketplace and prepaid contracts, billed a few times a year.
- **September was the peak**
  At $301K it was the highest consumption month of the year.

Consumption excludes Marketplace charges. AWS is billed across two payer accounts.

RUN-RATE

AI is growing while the rest of the estate shrinks

AI SERVICES

+703%

Q1 avg $12K/mo to Q3 avg $93K/mo

EVERYTHING ELSE

–13%

Q1 avg $226K/mo to Q3 avg $196K/mo

AI ANNUALISED

$1.22M

September run-rate times twelve

AI services covers Amazon Bedrock, Azure AI Foundry, Copilot Studio, Azure Cognitive Search, GitHub Copilot and GCP Vertex and Gemini.

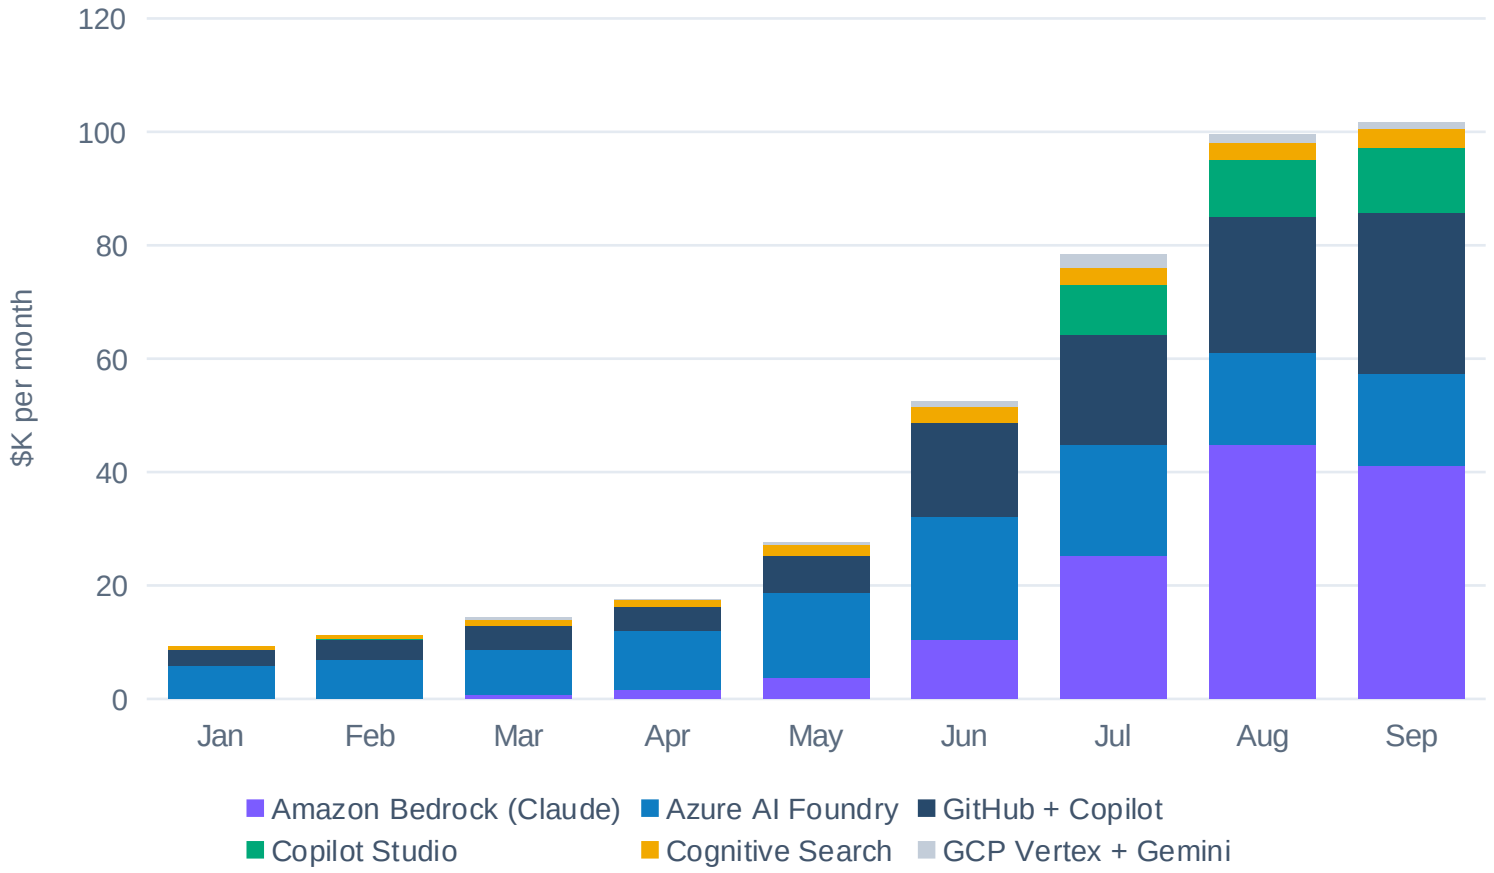

02

AI and the AI Factory

Amazon Bedrock, Azure AI Foundry, Copilot and the AI Factory programme. $412K year to date, and the line that is growing fastest.

AI SPEND

AI grew eleven-fold in nine months to a third of the cloud bill

AI SPEND, YTD

$412K

18% of all consumption

SEPTEMBER ALONE

$102K

against $9K in January

OF SEPTEMBER SPEND

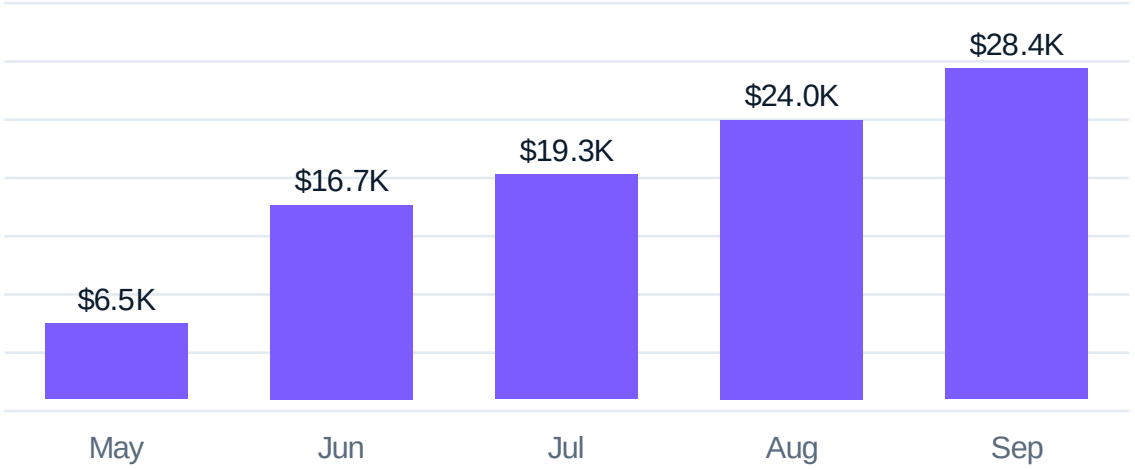

34%

was AI services

Bedrock is billed through AWS Marketplace. Foundry, Copilot Studio, Cognitive Search and GitHub are billed through Azure.

GitHub reached $28K a month, with AI credit growing fastest

GitHub billed through Azure ($K per month)

AI credit budget, enterprise harel-ins

$2,960 spent of $4,000 · 74%

Hard stop enabled

Anatomy of the GitHub bill · June 2026 invoice

GitHub Enterprise about 170 licences	**$3,574**
Copilot Business about 160 licences	**$3,044**
AI credit (GAC) 214,924 credits, 217 active users	**$2,149**

Where the AI credit goes

Claude Opus 4.6 accounts for 75% of all AI-credit consumption, and one cost centre (HR) for 73% of it. Model routing and a per-user quota of about 1,900 credits are the two levers.

Licensing is 75% of the GitHub bill and AI credit 25%, but the credit line is the one compounding.

GOVERNANCE

Four controls to put AI spend under budget discipline

1 Tag every AI service

Finish tagging resources by Service, Application, Cost Centre and Environment, including AI Gateway and AWS Bedrock, so AI can be charged back like any other service.

In progress Owner: Ariel Oral

2 Budgets with a hard stop

The GitHub AI-credit budget already stops usage at its ceiling. Apply the same pattern to Azure AI Foundry and Amazon Bedrock before the FY2027 ramp.

Planned Owner: Cloud Infrastructure

3 Model routing policy

Opus-class models carry about two thirds of both Bedrock and GitHub AI spend. Define which workloads justify a frontier model and route the rest to Sonnet or Haiku tiers.

Proposed Owner: AI Factory and FinOps

4 Quotas per user and per project

Publish a monthly credit allowance per developer, around 1,900, and a project-level ceiling, with consumption visible to the owning cost centre.

Proposed Owner: AI Factory and FinOps

03

Amazon Web Services

$2.61M year to date. $792K of metered consumption across two payer accounts, and $1.82M of Marketplace contracts.

AWS consumption is flat; Marketplace contracts move the total

CONSUMPTION YTD

$792K

$88K average per month

SEPTEMBER 2026

$101,028

–5.2% vs August (–$5,505)

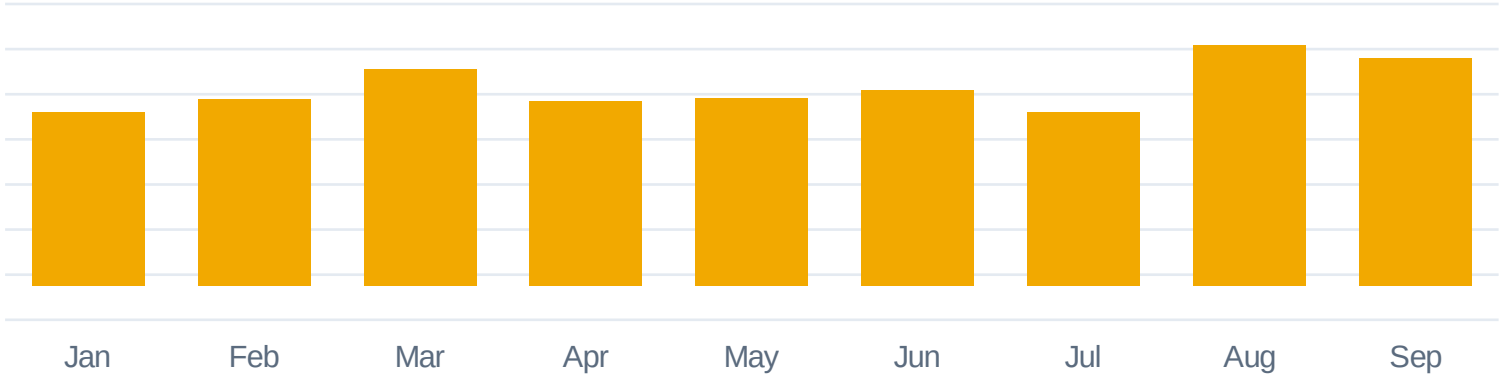

As reported in September: $791K

MARKETPLACE YTD

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$77K	$83K	$96K	$82K	$83K	$87K	$77K	$107K	$101K

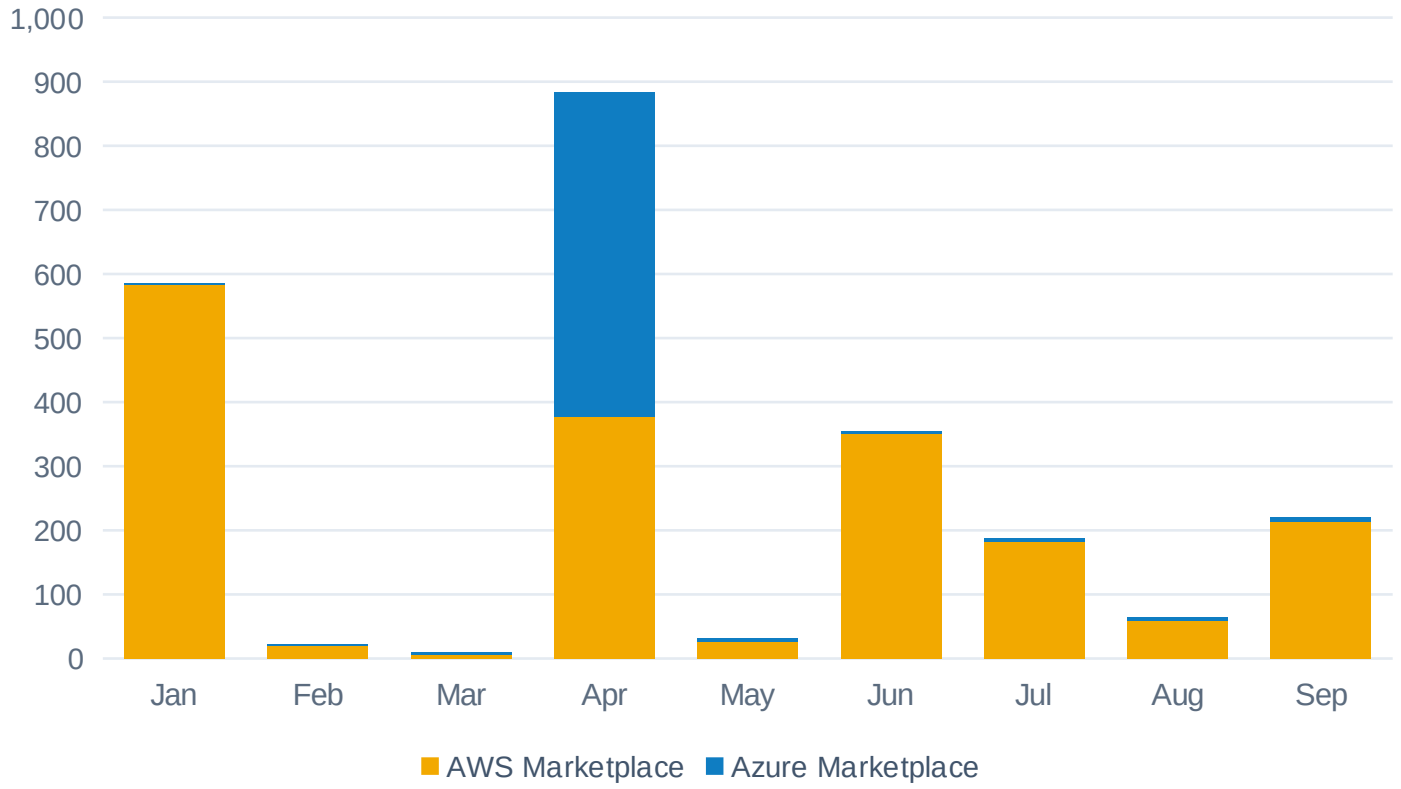

What moved

- **July fell to $77K**
  A MAP credit of $15.3K on ai-factory-dev
- **August peaked at $107K**
  Glacier archive and customers3-prod
- **September $101K**
  Steady, archive growth continues

Consumption excludes Marketplace. Charges span two payer accounts; the Harel IL payer is $166K of the total.

Two thirds of the AWS bill is contracts, not metered usage

Marketplace and prepaid contracts by month ($K)

Largest contracts, year to date

Databricks P3 pre-purchase	$504K
Splunk	$365K
TrendAI security	$257K
MongoDB Atlas	$192K
CrowdStrike Falcon	$171K
F5 Distributed Cloud	$166K
JFrog, new in September	$158K
Amazon Bedrock	$128K

72% of Marketplace is security tooling

January and April carry the annual renewals. September is the new JFrog supply-chain contract. Vendor detail is in the appendix.

04

Microsoft Azure

$2.05M year to date. The largest metered estate, growing every month since February, and the home of the Databricks commitment.

Azure has grown every month since February, up 26% on January

CONSUMPTION YTD

$1.51M

$167K average per month

SEPTEMBER 2026

$197,573

+3.2% vs August (+$6,163)

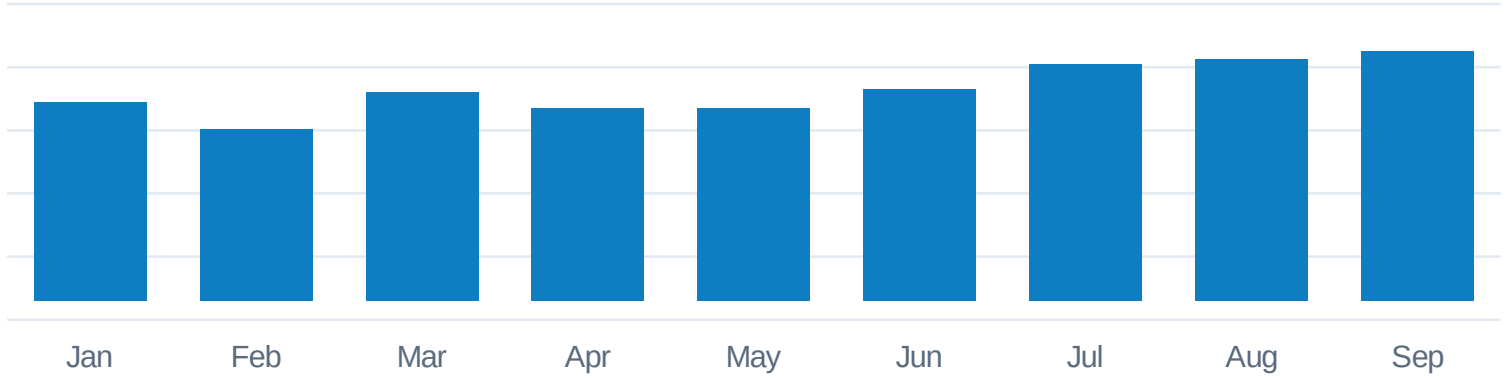

As reported in September: $1.50M

MARKETPLACE YTD

$542K

93% of it is Databricks

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$157K	$136K	$165K	$153K	$152K	$167K	$187K	$191K	$198K

What is driving it

- **AI Factory**
  $0.9K to $27.4K a month
- **GitHub**
  $6.5K to $28.4K since May
- **CloudOps**
  $0.3K to $11.3K from July

Consumption excludes Marketplace. DataCloud, SAP and CloudIT, which are 73% of Azure, were flat to down.

AZURE PRICING

Microsoft raises Azure prices on 1 February 2027

EFFECTIVE DATE

1 Feb 2027

Expected pricing change

MONTHLY IMPACT

+$4,700

Estimated on September usage

ANNUAL IMPACT

+$56,400

Carry into 2027 budget planning

On-demand virtual machines

Approximately 25% increase for the v1 and v2 series. Reserved instances are priced at purchase, so buying the identified RI pipeline before February holds today’s rate.

Regional compute and storage

West Europe, North Europe, France, Norway and Singapore, with some exceptions. Our regional exposure needs confirming against the resource inventory before the 2027 estimate is final.

Impact estimated on September consumption, as reported in the September source.

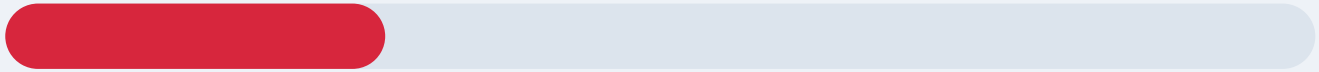

DATABRICKS COMMITMENT

The $504K commitment is 29% used after five of thirty-six months

Contract

Purchased	**28 April 2026**
Term	**3 years (P3Y)**
Product	**600,000 Databricks DBU hours**
Prepaid	**$504,000 via Azure Marketplace**

Cumulative utilisation at September 2026

29% of DBU hours consumed

14% of the term elapsed

DATABRICKS LINE COST

$0

All usage draws down the prepaid commitment

PROJECTED EXHAUSTION

Sep 2027

At the current rate, two years early

SUPPORTING INFRA / MONTH

$21.5K

VMs, network and storage, outside the commitment

Decision needed: top up the commitment in FY2027, or rebalance the Classic and Serverless mix to extend it.

05

Savings and optimisation

$578K realised and avoided so far this year, the compute coverage gap, and a further $190K identified and waiting on approval.

SCORECARD

The FinOps programme has returned $578K against FY2026

REALISED SAVINGS

$268K

Cost removed from the running bill

COST AVOIDED

$310K

Increases caught before they landed

TOTAL RETURNED

$578K

25% of YTD metered consumption

IDENTIFIED PIPELINE

$190K

Approved actions not yet implemented

WHERE IT CAME FROM

1 **Decommissioning**

Closing North Europe removed $70K a year of duplicated VMs, storage and gateways.

2 **Commitments**

VM reservations and a compute savings plan returned $132K a year between them.

3 **Alerting**

Two spend alerts caught $291K of increases before they became permanent.

Five actions produced 94% of the $268K realised

Realised savings · annualised

Decommission North Europe	$70K
VM reserved instances (Azure)	$67K
Compute savings plan (Azure)	$65K
Removed unnecessary VMs	$28K
Idle unattached disks	$21K
RDS reserved instances (AWS)	$8K
Unused SQL on expiring RI	$5K
SageMaker account clean-up (AWS)	$3K
App Service RI and RI refund	$1K

Cost avoided · annualised

Alert on CloudWatch increase	$219K
Alert on ongoing E1 increase	$72K
RI renewal, blob storage	$9K
EKS extended support, pre-prod	$9K
RI renewal, Redis Cache	$1K

Why avoidance counts

These are increases our monitoring caught and stopped before they reached an invoice. They never show as a reduction, but the budget would have carried them.

All figures annualised. Realised $267,707 and avoided $309,973.

AWS compute is 93% covered; Azure is only 54%

AWS, EC2 compute, September

Total $35,748

Spot	**$17,416**	49%
Compute Savings Plan	**$15,837**	44%
On-demand	**$2,495**	7%

93% of compute is on a discounted purchase option

Azure, virtual machines, September

Total $55,576

On-demand	**$25,606**	46%
Reservation	**$20,346**	37%
Compute Savings Plan	**$9,120**	16%
Spot	**$504**	1%

54% of compute is on a discounted purchase option

Closing the Azure gap is worth $47K a year in identified VM reservation purchases, and reservations hold their rate through the February price rise.

SAVINGS PIPELINE

$190K is identified and ready, 41% of it reservations

By business unit

SAP	$80K
CloudIT	$35K
AI Factory	$34K
Data Cloud	$18K
Actuary	$8K
AWS (all accounts)	$7K
Azure Sandbox	$4K
CloudOps	$2K
ITSec	$1K

By type of action

VM reserved instances	$47K
VM rightsizing	$31K
PostgreSQL reservations	$21K
Scheduled shutdown of 24/7 VMs	$25K
Premium to standard disks	$21K
Idle reserved disks	$13K
AKS reservations	$10K
Idle unattached disks	$7K
Other (AWS EC2, SQL, Redis)	$15K

Reservations and savings plans are $78K of the $190K, which needs a purchase decision rather than engineering time.

06

Risks and next steps

Three items that affect the FY2027 budget, the FinOps workplan for the next two quarters, and the decisions we are asking for today.

Three things that will move the FY2027 budget

PRICING

Azure raises prices on 1 February 2027

Microsoft is expected to lift on-demand VM pricing for v1 and v2 series by about 25%, with further regional increases in West EU, North EU, France, Norway and Singapore.

Mitigation: reservations lock today's rate, so buy the RI pipeline before February.

+$4,700

per month

+$56,400 a year

Estimated on September usage

COMMITMENT

The Databricks commitment runs out two years early

29% of the 600,000 prepaid DBU hours were consumed in the first five months of a thirty-six month term. At that rate the $504K commitment is exhausted around September 2027.

Decision: top up in FY2027, or rebalance Classic and Serverless to extend the term.

Sep 2027

projected exhaustion

$504K prepaid

29% consumed to date

AI RUN-RATE

AI spend has no ceiling yet

AI reached $102K in September and is still climbing. Only GitHub AI credit has a budget with a hard stop; Foundry and Bedrock have neither a cap nor a quota.

Mitigation: extend the GitHub budget pattern to Foundry and Bedrock.

$1.22M

annualised at Sep run-rate

eleven-fold since January

34% of all consumption

ROADMAP

The FinOps workplan for the next two quarters

	משימה	סטטוס	אחראי
1	**פרויקט חיסכון והתייעלות** מימוש תכנית החיסכון: Rightsizing, Auto Shutdown, Reserved Instances	מתוכנן	אגף תשתיות
2	**הטמעת WIV.AI** פלטפורמת ממשל וניטור עלויות ושימושים, ללא עלות רישוי	מתוכנן	אריאל אוראל
3	**תיוג משאבים לפי שירות** השלמת תיוג לפי Service, Application, Cost Center, Environment לצורך Chargeback/Showback, כולל AI Gateway ו-AWS Bedrock	בתהליך	אריאל אוראל
4	**הטמעת AWS FinOps Agent** ניתוח עלויות אוטומטי, זיהוי המלצות חיסכון ואופטימיזציה של שירותי AWS	מתוכנן	אריאל
5	**אופטימיזציית Databricks Commitment** הגדלת ניצול חוזה ה-DBU, מעקב Utilization ואיזון Classic/Serverless	לקביעה	—

Owners and status as at the September 2026 FinOps review.

THE ASK

Three decisions we would like to close today

1

Approve the reservation purchase programme

$78K a year of identified reserved-instance and savings-plan purchases across SAP, CloudIT, AI Factory and Data Cloud. Buying before February 2027 also locks pricing ahead of the Azure increase.

Needs: capital approval · Owner: Cloud Infrastructure

2

Set an FY2027 envelope and controls for AI

Budget for roughly $1.3M of AI consumption and attach the controls: hard-stop budgets on Foundry and Bedrock, a model-routing policy, and quotas per project.

Needs: budget line and policy sign-off · Owner: AI Factory and FinOps

3

Choose the Databricks path before Q1

Either top up the DBU commitment in the FY2027 plan, or fund an optimisation sprint on the Classic and Serverless mix to stretch the existing contract.

Needs: a decision by December 2026 · Owner: Data Cloud and FinOps

Thank you

Account, service and cost-centre detail follows in the appendix.

בשביל השקט הנפשי שלך

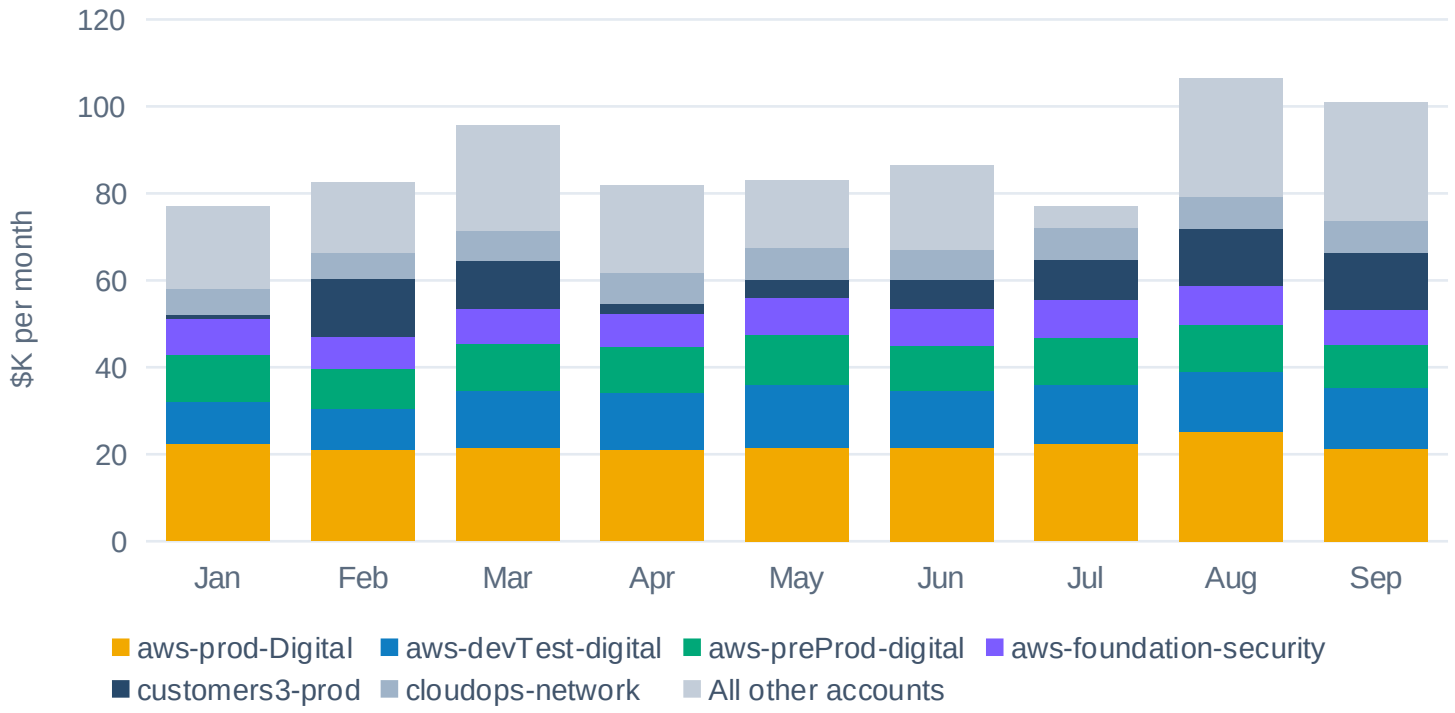

A

Appendix

Account, service, cost-centre and project detail, the North Europe decommission, and notes on how these figures were produced.

The Digital platform is half of all AWS consumption

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$77K	$83K	$96K	$82K	$83K	$87K	$77K	$107K	$101K

SEPTEMBER 2026

$101,028

–5.2% vs August (–$5,505)

As reported in September: $791K

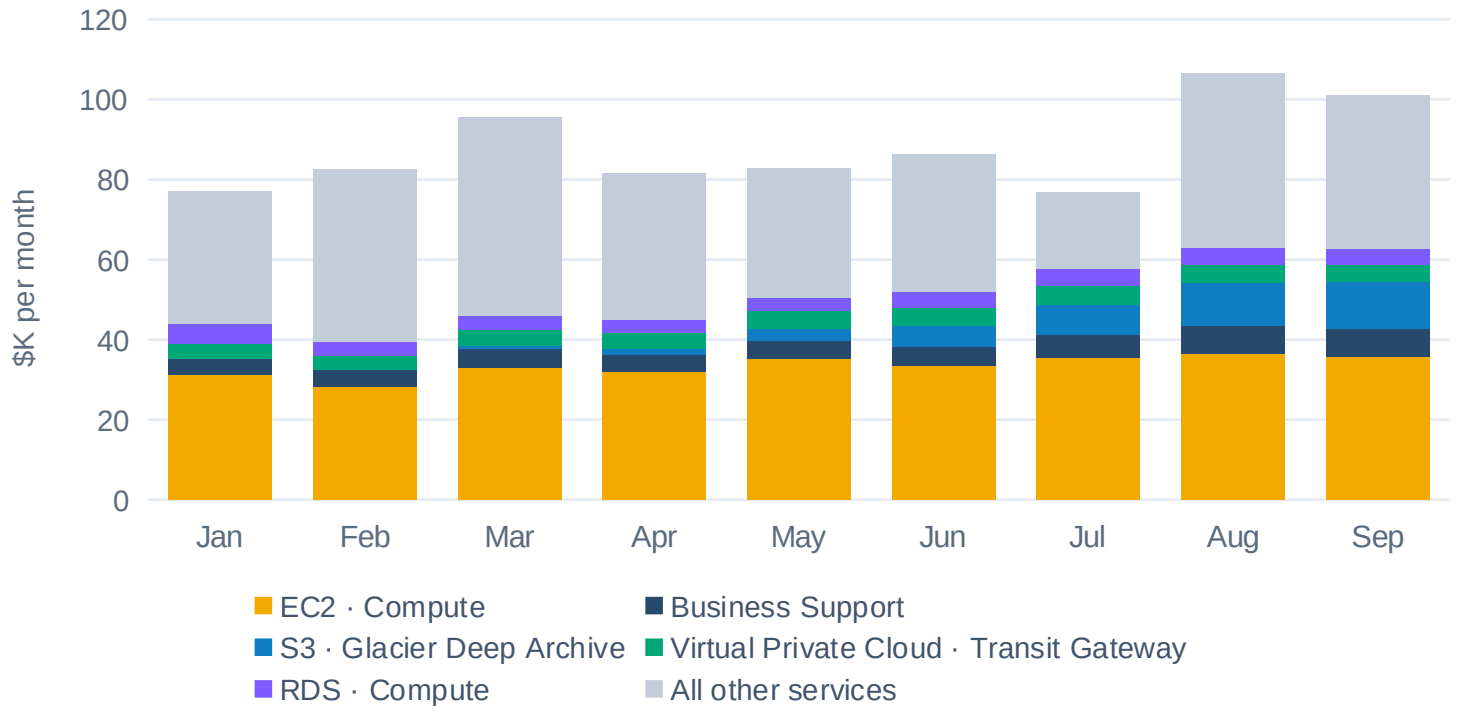

Year to date by account

aws-prod-Digital	$198K
aws-devTest-digital	$114K
aws-preProd-digital	$95K
foundation-security	$74K
customers3-prod	$74K

The top three Digital accounts are $407K of the $792K. customers3-prod is the most volatile, swinging between $0.9K and $13.5K a month.

EC2 compute is 38% of the AWS bill and 93% covered

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$77K	$83K	$96K	$82K	$83K	$87K	$77K	$107K	$101K

SEPTEMBER 2026

$101,028

–5.2% vs August (–$5,505)

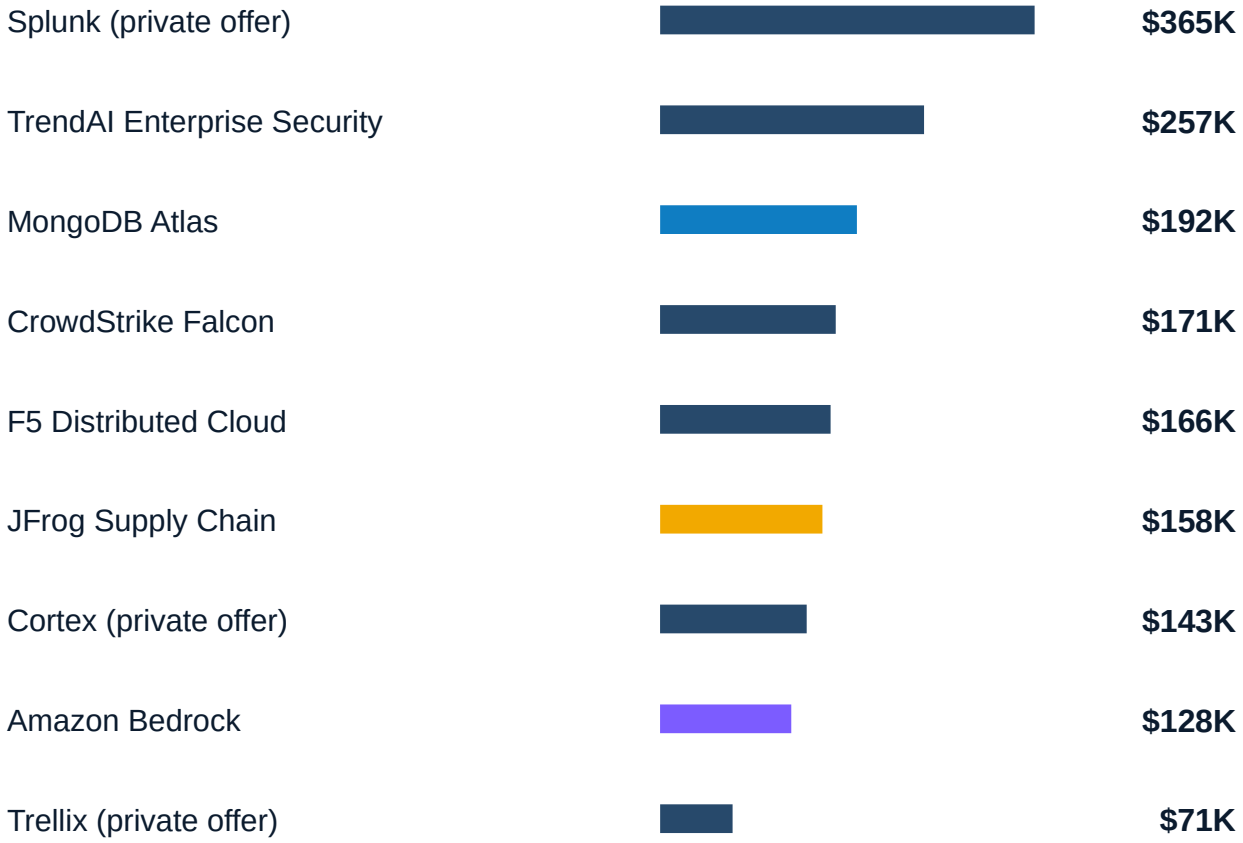

As reported in September: $791K

Year to date by service

EC2 · Compute	$300K
Business Support	$46K
S3 · Glacier Archive	$41K
VPC · Transit Gateway	$38K
RDS · Compute	$36K

Glacier Deep Archive went from $0 to $12K a month since February and is now the third largest AWS service line, which makes a retention review worthwhile.

Nine vendors carry 91% of the $1.82M Marketplace spend

MARKETPLACE YTD

$1.82M

70% of total AWS spend

NEW IN SEPTEMBER

$158K

JFrog Software Supply Chain

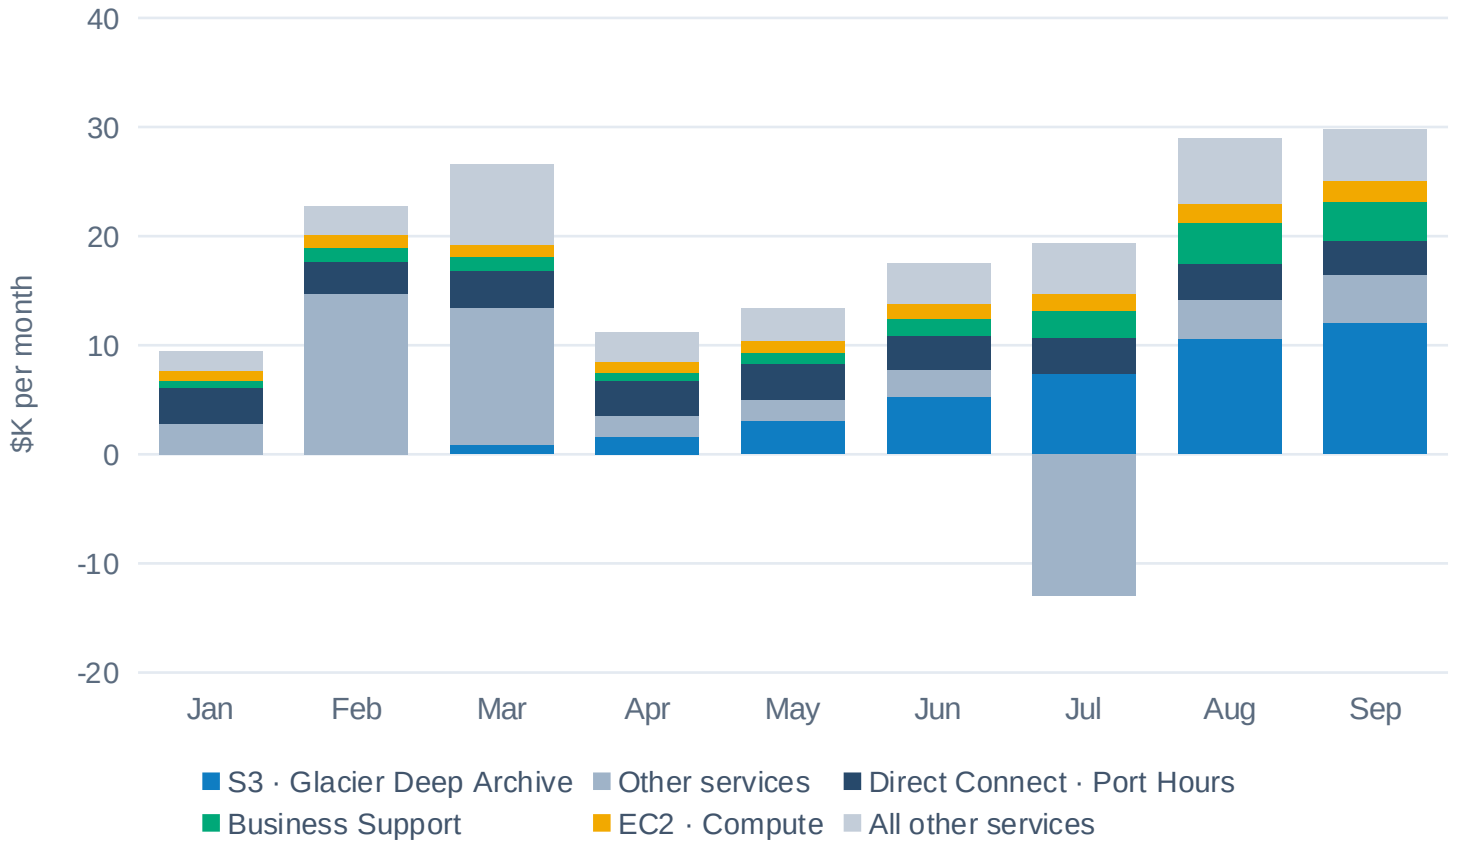

IS SECURITY TOOLING

72%

Splunk, TrendAI, CrowdStrike, F5, Trellix, Cortex, Fortinet

Marketplace charges are billed as contracts, mostly annual, so a month-on-month comparison is not meaningful.

The second AWS payer account is $166K year to date

Year to date by service

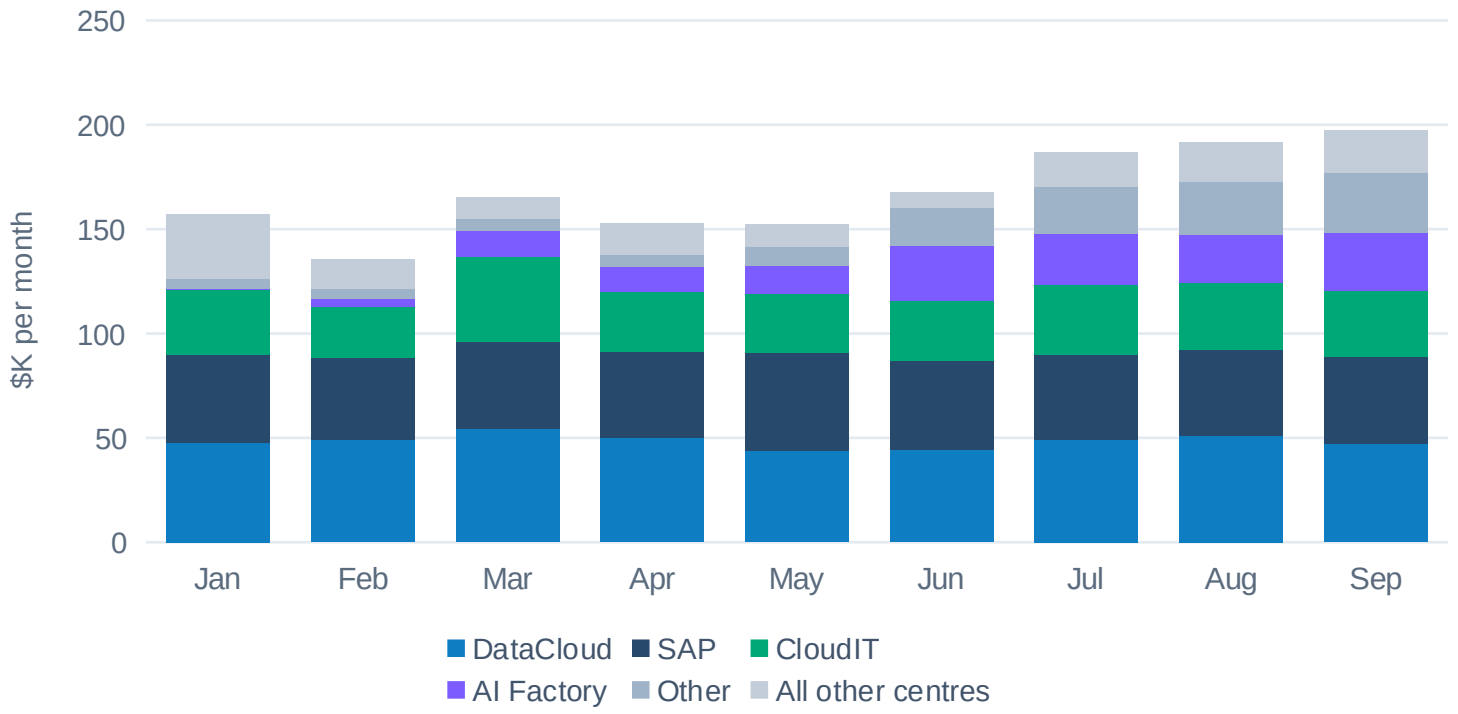

S3 · Glacier Archive	**$41K**
Other services	**$31K**
Direct Connect	**$29K**
Business Support	**$16K**
EC2 · Compute	**$12K**
S3 · API	**$11K**
VPC Endpoints	**$8K**
Transit Gateway	**$5K**

Glacier Deep Archive is 25% of it

Included within the $792K AWS consumption total. The negative July bar is a MAP contract credit of $13.0K against other services.

Three cost centres hold 73% of Azure spend

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$157K	$136K	$165K	$153K	$152K	$167K	$187K	$191K	$198K

SEPTEMBER 2026

$197,573

+3.2% vs August (+$6,163)

As reported in September: $1.50M

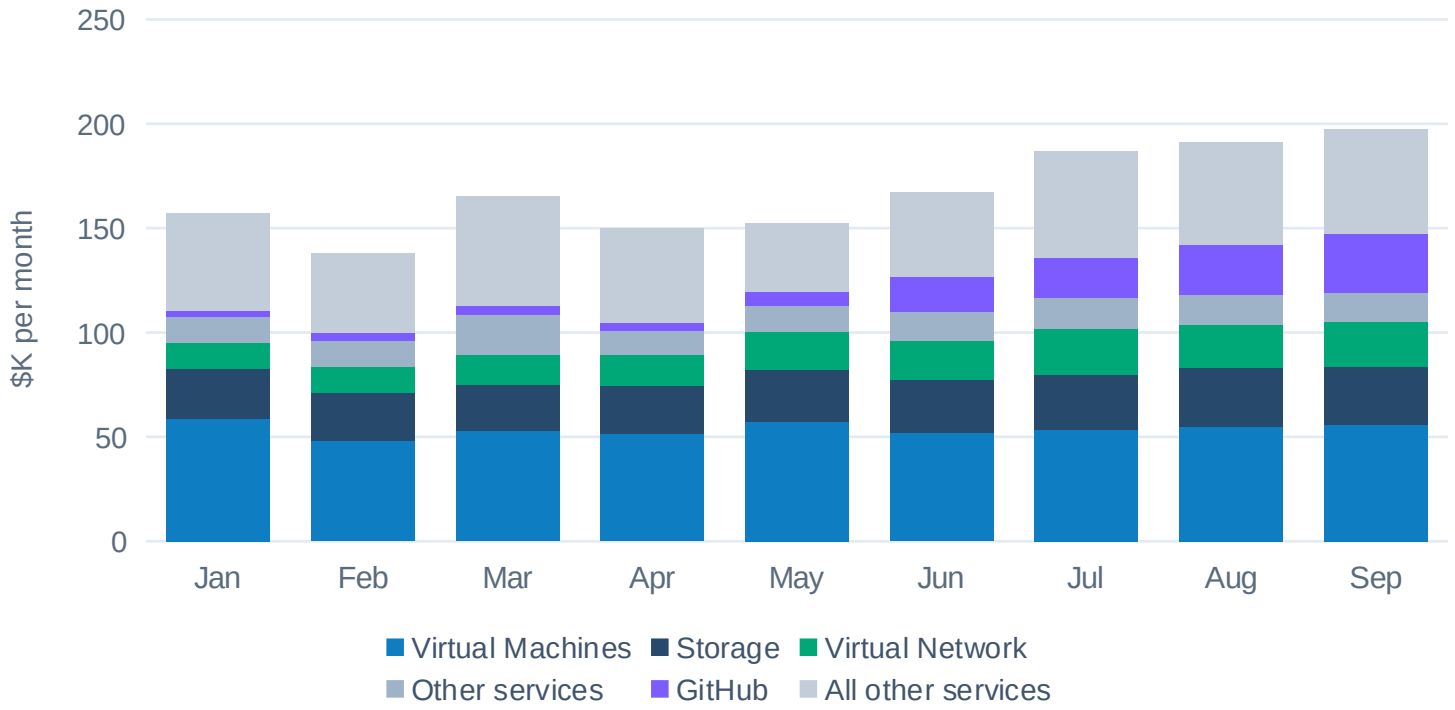

Year to date by cost centre

DataCloud	$437K
SAP	$377K
CloudIT	$280K
AI Factory	$144K
Other	$125K

DataCloud, SAP and CloudIT are stable. Growth sits in AI Factory, which went from $0.9K to $27.4K a month, in CloudOps, and in the unallocated "other" bucket of $125K.

Core infrastructure is 57% of Azure spend

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep
$157K	$136K	$165K	$153K	$152K	$167K	$187K	$191K	$198K

SEPTEMBER 2026

$197,573

+3.2% vs August (+$6,163)

As reported in September: $1.50M

Year to date by service

Virtual Machines	$484K
Storage	$224K
Virtual Network	$156K
Other services	$125K
GitHub	$110K

Virtual Machines alone are 32% of Azure spend. With Storage and Virtual Network they total $864K, which is where rightsizing, reservations and disk tiering apply.

Every Azure cost centre, January to September

DataCloud $437K

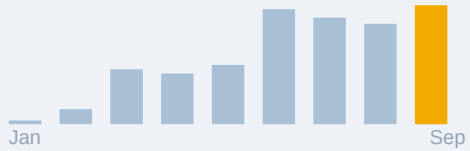

SAP $377K

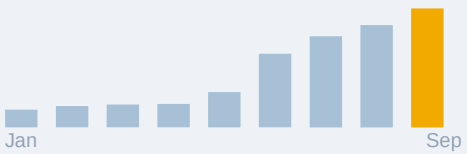

CloudIT $280K

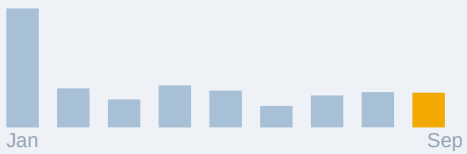

AI Factory $144K

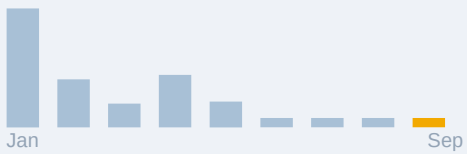

Other $125K

Actuary $49K

Risk Agility $34K

CloudOps $29K

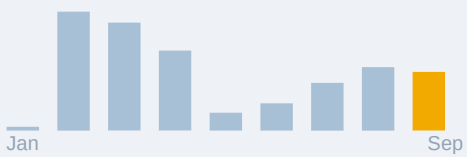

ITSec $19K

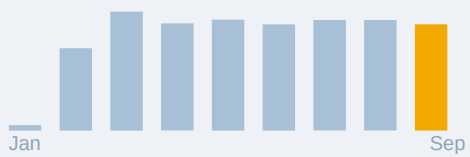

Basasach $7K

Investments $6K

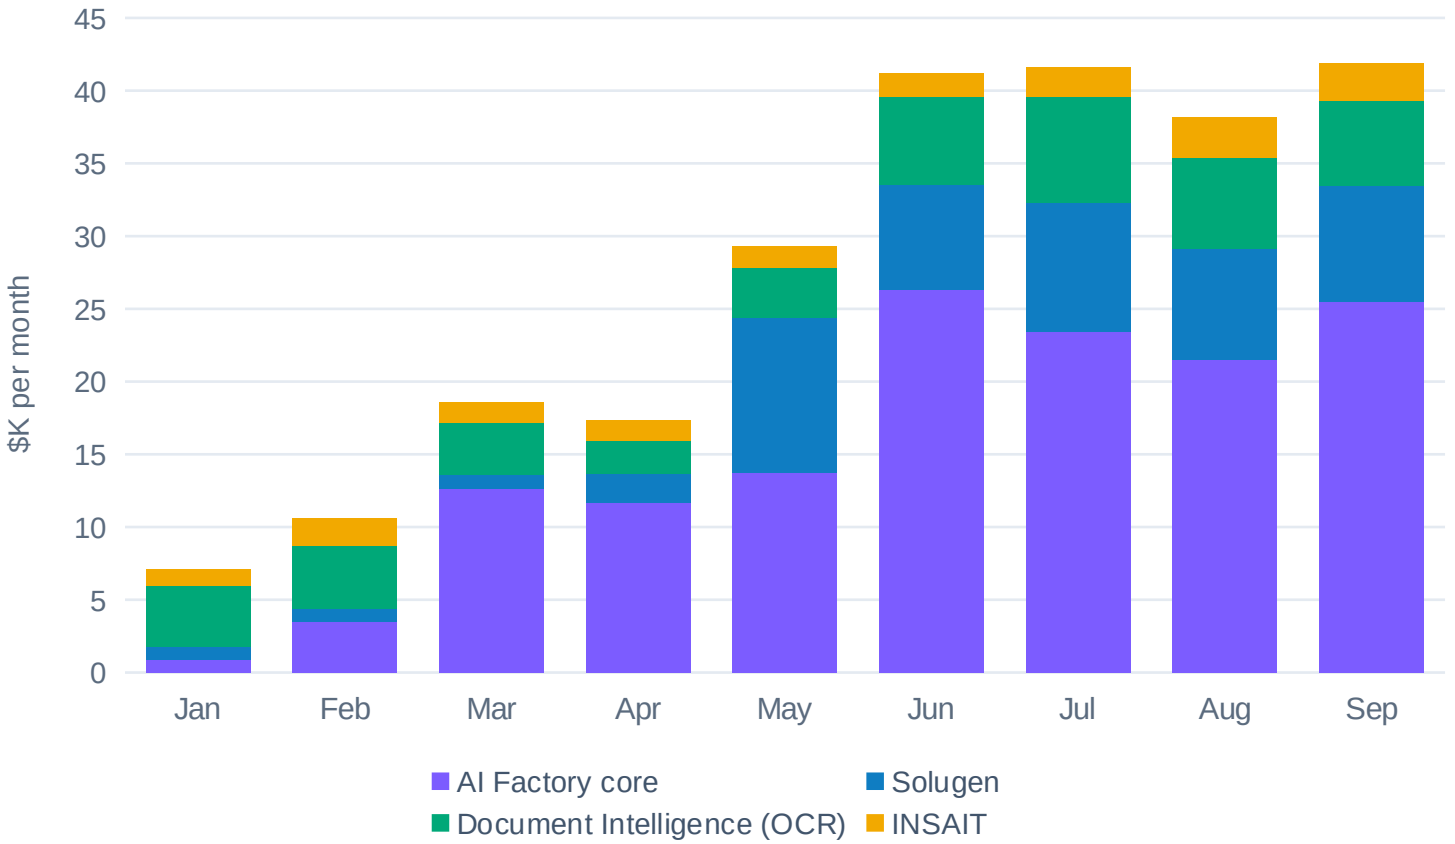

Integration $0.4K

Each sparkline is scaled to its own maximum and September is highlighted. Totals are year to date.

The AI Factory programme has consumed $246K across four projects

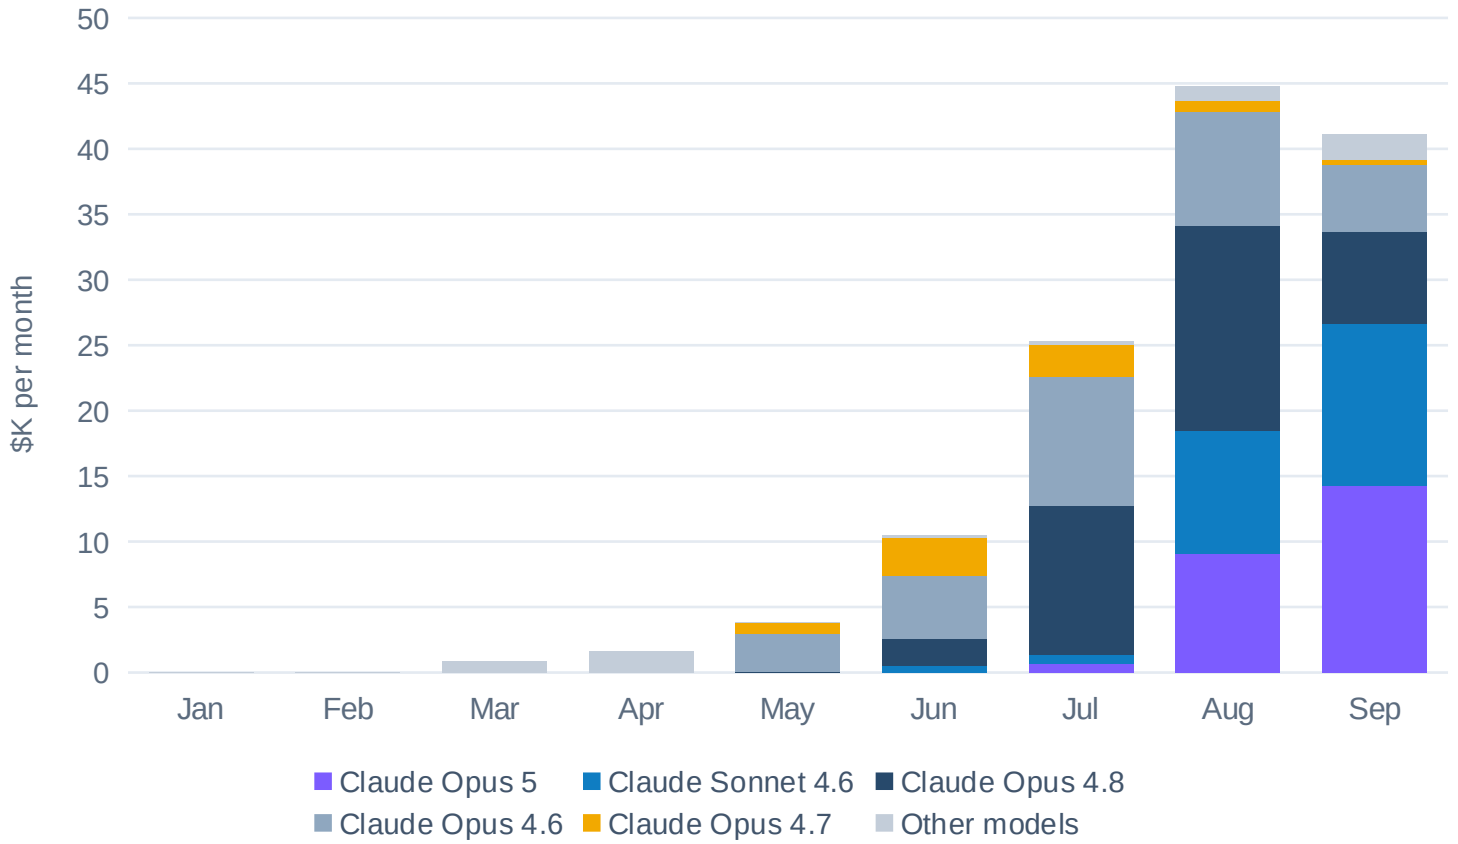

Year to date by project

AI Factory core	$139K
Solugen	$47K
Document Intelligence (OCR)	$43K
INSAIT	$16K

Programme total $246K year to date

AI Factory spend spans several Azure cost centres. The project view is the planning unit; the cost centre is the billing unit.

Bedrock reached $41K in September as newer models took over

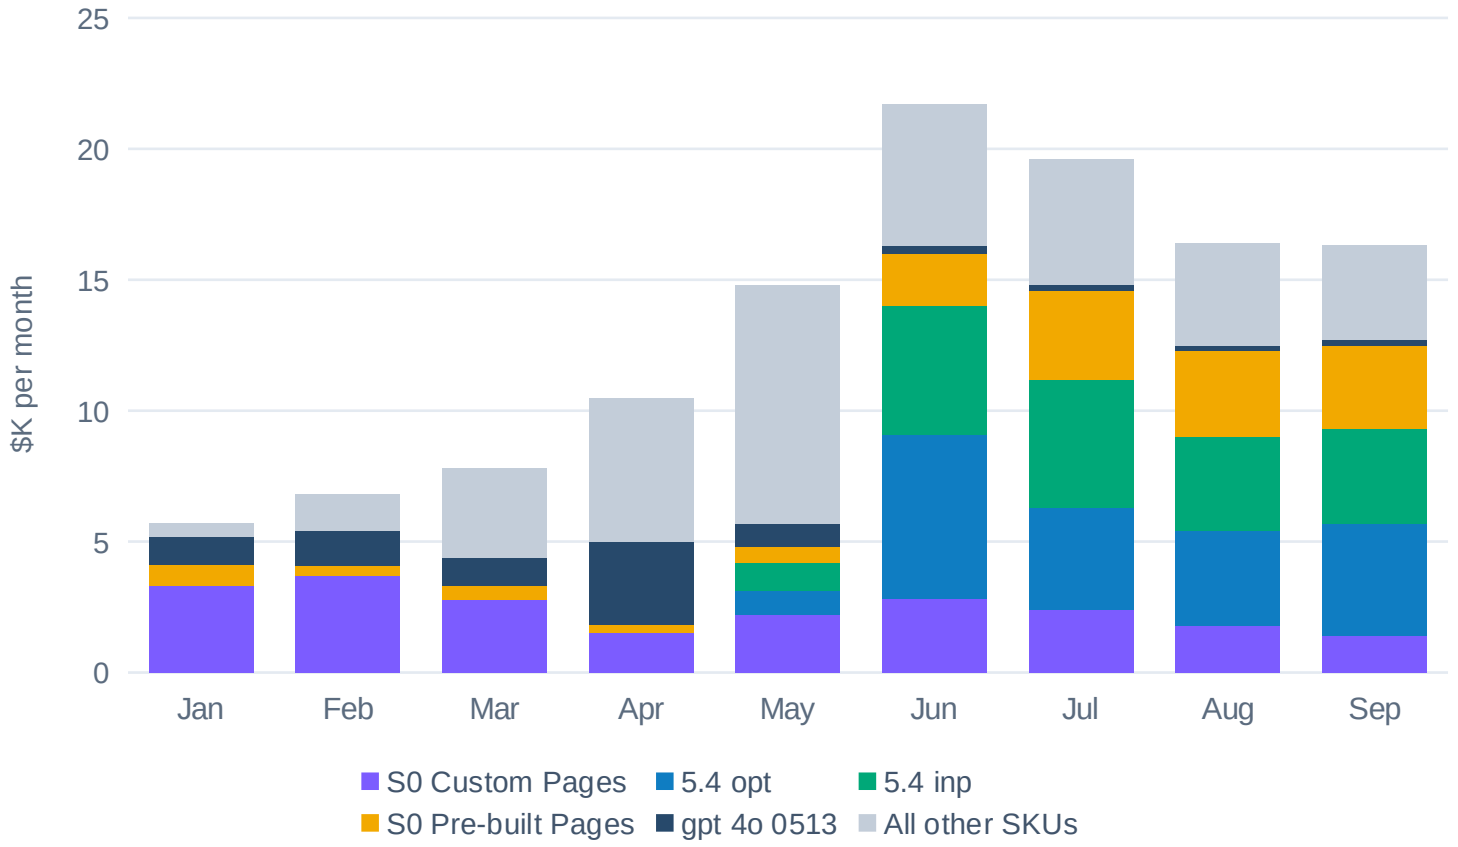

Year to date by model

Opus 4.8	$36K
Opus 4.6	$31K
Opus 5	$24K
Sonnet 4.6	$23K
Opus 4.7	$7K
Sonnet 5	$3K
Amazon Bedrock Edition	$2K
Haiku 4.5	$1K

Opus 5 and Sonnet 4.6 are 65% of September

Billed through AWS Marketplace. The shift to Opus 5 and Sonnet 4.6 is a routing decision as much as a cost one.

Foundry models and tools: $120K across 37 SKUs

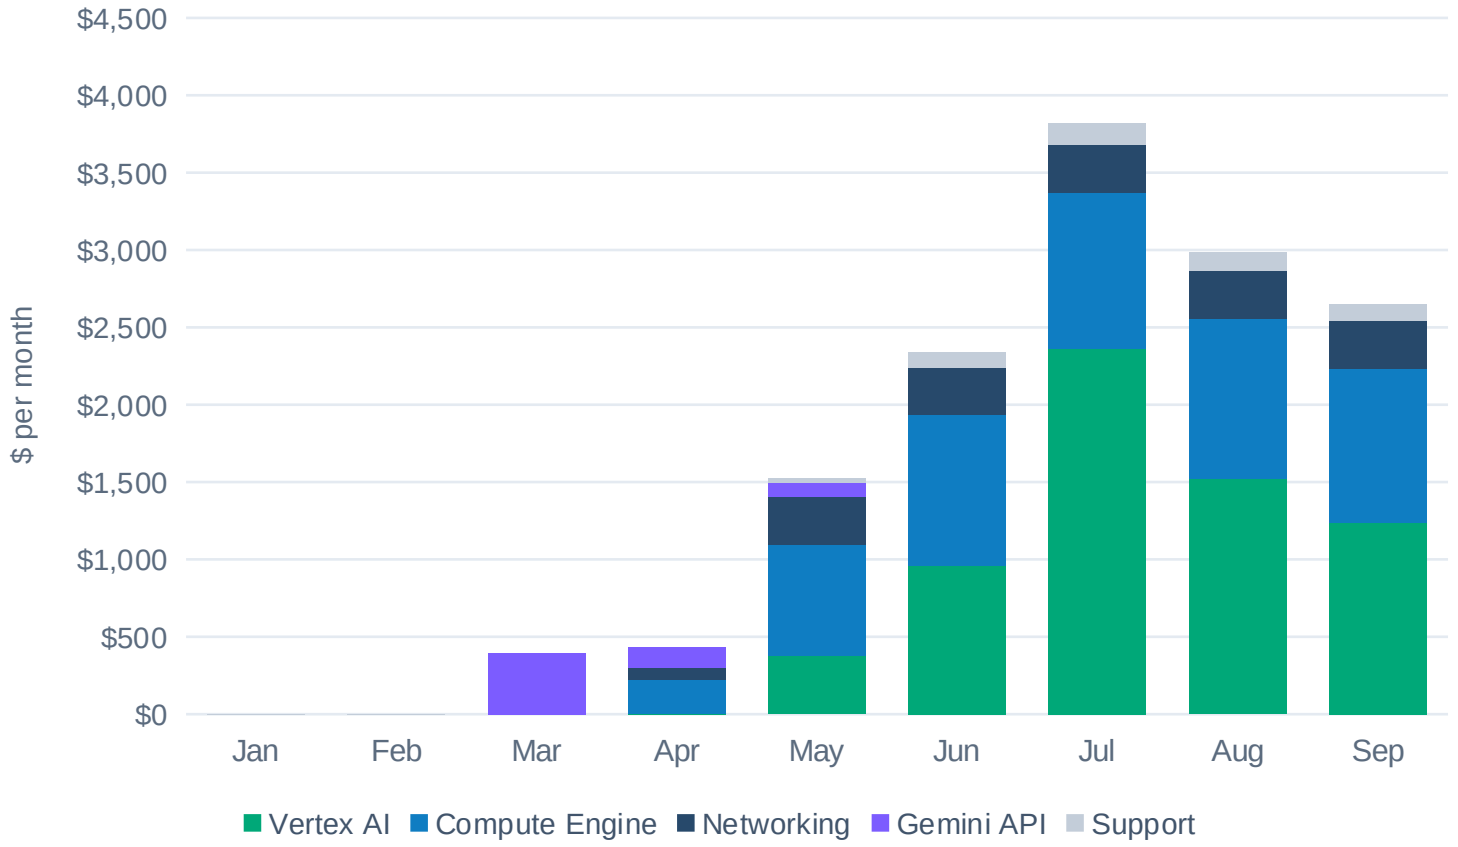

Largest SKUs, year to date

S0 Custom Pages	$22K
5.4 opt	$19K
5.4 inp	$18K
S0 Pre-built Pages	$15K
gpt 4o 0513	$8K
gpt 4o 1120	$7K
GPT 5	$7K
GPT 5.1	$5K

Document-intelligence page SKUs (S0 Custom, Pre-built and Add-on) and the 5.4 model family account for most of the spend.

GCP is a $14K pilot and almost entirely AI

Google Cloud

GCP YTD

$13.5K

Started March 2026

IS VERTEX AI AND GEMINI

52%

Vertex $6.5K, Gemini $0.6K

No commitment and no contract. GCP stays a pilot until a workload justifies a third platform. A negative "other services" line reflects credits applied during the pilot.

Decommissioning North Europe removed $5,871 a month

Service	Prod	SAP Production	Shared Resources	Total
Virtual Machines	$154	$1,661	$550	**$2,365**

ANNUALISED

$70K

$5,871 times twelve

The largest single realised saving of FY2026. Figures are the final month of North Europe consumption.

How these figures were produced

- **Period and currency**
  All figures cover 1 January to 30 September 2026, nine months, stated in US dollars.

- **AWS payers**
  AWS is billed across two payer accounts. The Harel IL payer is $166K of the $792K consumption total.

- **Savings basis**
  Realised savings and cost avoidance are annualised run-rate impacts at the point of implementation, not year-to-date cash.

- **Sources**
  AWS Cost Explorer, Azure Cost Management, Google Cloud Billing and the GitHub billing portal, extracted for the September 2026 review.

- **Consumption and committed**
  "Consumption" is metered usage. Marketplace and prepaid contracts are reported separately and excluded from consumption totals unless stated.

- **Azure Marketplace**
  Marketplace charges sit under the Shared Resources subscription.

- **AI definition**
  AI services covers Amazon Bedrock, Azure AI Foundry models and tools, Microsoft Copilot Studio, Azure Cognitive Search, GitHub and Copilot, and GCP Vertex AI and Gemini.

- **Open reconciliation**
  Azure Marketplace sums to $542K here against $563K quoted in earlier reporting. The $21K difference is under review and does not affect the consumption figures.
